

M.S. in Information and Technology Management

A GROWING AND LUCRATIVE FIELD

As technology continues to shape an increasingly digitized business world, the Bureau of Labor Statistics reports that computer and information systems manager jobs will grow 11% by 2028 — much faster than the average for other occupations. In 2019, the media average wage for these positions was \$146,360. **Many organizations require their IT managers to have a graduate degree.**

UT's Sykes College of Business is accredited by AACSB International, an honor held by only six percent of business schools worldwide.

SAP is taught in two of the ITM program's courses, preparing students to take the certification workshop and exam to become an SAP Certified Business Associate with SAP ERP.

Improve your career advancement and earning potential as an IT professional!

The M.S. in Information and Technology Management is designed for IT professionals who want to **develop both their technical expertise and managerial skills** to advance their career. Students can customize the degree to meet their goals and is ideal for mid-career professionals as well as younger employees seeking accelerated career growth. Along with a comprehensive education in IT and managerial topics, the program offers electives in cybersecurity, business analytics and quantitative methods.

This rigorous program features small class sizes and hands-on learning using industry-standard software. Students participate in real-world projects analyzing the technology needs of businesses to improve performance and productivity. Courses also help students **prepare for top professional certifications** such as the SAP ERP certificate and Project Management Professional (PMP) certificate.
